# J-SERIES Miniature Pressure Switches

## Low-Cost Switches with Non-Adjustable Set Points

### Features:

- Tamperproof, factory-set, non-adjustable set points.
- Fixed deadband.
- Environmentally sealed against dust, water, oil and salt spray, e.g., for off-highway equipment.
- Vented construction for stable set points throughout operating range.
- Vibration and shock resistant to 10 G's.
- Precision electrical snap-action switch.

### General Description:

J-Series miniature pressure switches have factory-set non-adjustable set points and fixed deadband, with diaphragm/piston sensor. J-Series switches are CSA approved and UL listed under "Industrial Control Equipment". J-Series switches are sealed with specially compounded epoxy that maintains its sealing integrity from -40 to 250°F.

### Proof pressure:

250 psig. (Consult factory for higher pressures).

### Process connection:

Standard: 1/8" NPT Ext, 1/8" NPT Int, 1/4" NPT Ext.  
Optional: 1/4" NPT Int (eighth digit "3").

### Standard Electrical Ratings

5 Amp Res., 125 VAC  
5 Amp Res., 250 VAC  
3 Amp Res., 28 VDC

### Standard Temperature Ratings

**Ambient:** -4°F (-20°C) to 140°F (60°C)  
**Fluid:** -4°F (-20°C) to 180°F (82°C)

### Wetted Materials (Process Connection & Diaphragm)

Standard: Brass and Buna "N"  
Optional Process Connections:

- 316 SS (sixth digit "4")
- Carbon steel (sixth digit "6")

Optional Diaphragms:

- Viton (seventh digit "2")
- Neoprene (seventh digit "3")
- Ethylene propylene (seventh digit "6")
- Fluorosilicone (seventh digit "7")

### Dimensions (inches)

### Switch Options

Gold contacts for low power circuits: Add Suffix "P"  
Tight deadband, 25-50% reduction: Add Suffix "T"  
11 Amp Res., 125 VAC contacts: Add Suffix "Y"

## How to Select and Order

ASCO J-Series switches are a single switch and transducer assembly.

### How to Select

1. Select type of switch (normally open, normally closed or SPDT and screw terminal or wire leads).
2. Select desired set point for either decreasing pressure or increasing pressure.
3. Select desired process connection.

### How to Order

Simply order the selected J-Series pressure switch by catalog number, e.g., JB67A218A describes a normally open, screw terminal pressure switch with set point decreasing of 6.5 psig and set point increasing of 8.5 psig, 1/8" NPT external brass process connection and Buna "N" diaphragm.

### Options

Add appropriate suffix or change appropriate digit in catalog number for desired option, e.g., JB67A228A<sup>P</sup> describes a normally open, screw terminal pressure switch with optional viton diaphragm (seventh digit "2") and gold contact snap switch (suffix "P").

① Values shown are nominal.

② Deadband value is difference between the increasing and decreasing set points.

③ May be used for panel or bracket mounting.

# H-SERIES Miniature Pressure Switches

## Low-Cost Switches with Adjustable Set Points

### Features:

- Field adjustable set points.
- Fixed deadband.
- Choice of open frame type, general purpose or watertight enclosure.
- Small size.
- Mounts in any position.
- Rugged and vibration resistant, e.g., for compressors.
- Visual adjustment scales in psig and bars.

### General Description:

H-Series miniature pressure switches have field adjustable set points and fixed deadband, with diaphragm/piston sensor. They are available in open frame construction, Type 1 general purpose or Type 4 watertight enclosures. The resilient diaphragm/piston construction helps provide long life and maintains set point repeatability despite environmental temperature variations. The full size electrical switch is a precision UL listed, snap-action type. H-Series switches are CSA approved and are UL listed under "Industrial Control Equipment".

### Proof pressure:

250 psig. (Consult factory for higher pressures).

### Process connection:

Standard: 1/8" NPT Ext, 1/8" NPT Int, 1/4" NPT Ext.  
Optional: 1/4" NPT Int (eighth digit "3").

### Standard Electrical Ratings

15 Amp Res., 125 VAC  
10 Amp Res., 250 VAC  
1/8 HP, 125 VAC  
1/4 HP, 250 VAC  
1/2 Amp Res., 125 VDC  
1/4 Amp Res., 250 VDC

① Open frame construction, UL recognized component.

### Wetted Materials (Process Connection & Diaphragm)

Standard: Brass and Buna "N"

Optional Process Connections:

- 316 SS (sixth digit "4")
- Carbon steel (sixth digit "6")

Optional Diaphragms:

- Viton (seventh digit "2")
- Neoprene (seventh digit "3")
- Ethylene propylene (seventh digit "6")
- Fluorosilicone (seventh digit "7")

### Standard Temperature Ratings

**Ambient:** -4°F (-20°C) to 140°F (60°C)  
**Fluid:** -4°F (-20°C) to 180°F (82°C)

### Switch Options

See page 34 for optional snap switches.

## How to Select and Order

ASCO H-Series switches are a single switch and transducer assembly.

### How to Select

1. Select type of switch (open frame, general purpose or watertight)..
2. Select the adjustable operating range based on the desired actuation pressure.
3. Select desired process connection.

### How to Order

Simply order the selected H-Series pressure switch by catalog number, e.g., HB46A218 describes an open frame pressure switch with adjustable operating range of 4 to 12 psig, 1/8" NPT external brass process connection and Buna "N" diaphragm.

### Options

Add appropriate suffix or change appropriate digit in catalog number for desired option, e.g., HB46A2 2 8 P describes an open frame pressure switch with optional viton diaphragm (seventh digit "2") and gold contact snap switch (suffix "P").

# H-SERIES Miniature Pressure Switches

## Suffix S: Low-Cost Switches with Adjustable Set Points and Adjustable Deadband

### Features:

- Field adjustable set points.
- Limited adjustable deadband.
- Choice of open frame type, general purpose or watertight enclosure.
- Small size.
- Mounts in any position.
- Rugged and vibration resistant, e.g., for compressors.
- Visual adjustment scales in psig and bars.

### Standard Ratings and Wetted Materials

(See page 4)

### Dimensions

(See page 5)

### How to Select and Order

ASCO H-Series Suffix S switches are a single switch and transducer assembly.

#### How to Select

1. Select type of switch enclosure (open frame, general purpose or watertight).
2. Select the adjustable operating range based on the desired actuation pressure and desired deadband (reactuation) pressure.
3. Select desired process connection.

#### How to Order

Simply order the selected H-Series Suffix S pressure switch by catalog number, e.g., HB46A218S describes an open frame H-Series Suffix S pressure switch with adjustable operating range of 4 to 12 psig and adjustable deadband at mid-range of 1.5 to 3.5 psig, 1/8" NPT external brass process connection and Buna "N" diaphragm.

#### Options (See page 4)

Change appropriate digit in catalog number for desired option, e.g., HB46A2[2]18S describes an open frame pressure switch with adjustable operating range and deadband with optional viton diaphragm (seventh digit "2").

### Select H-Series Suffix S switch below

① Values shown are nominal. ② May be used for panel or bracket mounting.

## Suffix L: Lowest-Cost Switches with Adjustable Set Points (Open Frame Construction)

### Features:

- Low cost for OEM applications.
- Miniature size.
- Wide selection of adjustable ranges.
- Fixed deadband.
- Resilient diaphragm/piston sensor for long life.
- Precision single-pole, double-throw snap switch with quick-connect 1/4" spade terminals.

### Standard Ratings and Wetted Materials

(See page 4)

### Dimensions (inches)

### How to Select and Order

ASCO H-Series Suffix L switches are a single switch and transducer assembly.

#### How to Select

1. Select the adjustable operating range based on the desired actuation pressure.
2. Select desired process connection.

#### How to Order

Simply order the selected H-Series Suffix L pressure switch by catalog number, e.g., HB46A218L describes an open frame pressure switch with adjustable operating range of 4 to 12 psig, 1/8" NPT external brass process connection and Buna "N" diaphragm.

#### Options (See page 4)

Change appropriate digit in catalog number for desired option, e.g., HB46A228L describes an open frame pressure switch with adjustable operating range and optional viton diaphragm (seventh digit "2").

**Note:** Optional snap switches not available on suffix "L" units.

### Select H-Series Suffix L switch below

Adjustable Operating Range (psig)	Fixed Deadband At Mid-Range (psig) ①	SPDT (Form "C" Contact), Brass and Buna "N"

# P-SERIES Pressure Switches

## Switches for Vacuum through 6000 psig with Adjustable Set Points and Fixed or Adjustable Deadband

### Features:

- Set point repeatability,  $\pm 1\%$  of operating range.
- All wiring terminals, adjustments and visual scales are accessible from the front of the switch.
- Choice of open frame type, general purpose or watertight enclosure.
- Choice of fixed, limited-adjustable or full-range adjustable deadband.
- Choice of single or two-stage units.
- Compact size.
- Mounts in any position.
- Rugged and vibration resistant; e.g., for compressors.
- Visual adjustment scales in psig and bars.
- Wide selection of transducer wetted materials suitable for air, water, oil or corrosive fluids.
- Mix and match switch and transducer components for increased stock flexibility or to change pressure ranges in field.

### General Description:

ASCO P-Series pressure switches consist of an open frame or enclosure protected switch unit and a transducer unit. They can be ordered separately for customer stocking and/or field assembly or as a complete factory-assembled unit.

### Switch

P-Series pressure switch units incorporate the unique ASCO TRI-POINT alternating fulcrum balance plate to control the operation of one or more electrical snap-action switches. The electrical snap-action switch together with the adjusting mechanism is a fully-tested, self-contained subassembly.

### Transducer

Transducer unit incorporates a diaphragm/piston type pressure sensor, and is also a fully-tested, self-contained subassembly.

### Operation

When pressure is applied to the transducer it is converted into movement of the piston. This piston movement is then used to control the operation of the electrical snap-action switch in the switch unit.

**Options** (See pages 34-35)

### Standard Electrical Ratings

#### PA, PB, PC ① Series

- 15 Amp Res., 125 VAC
- 10 Amp Res., 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC
- 1/2 Amp Res., 125 VDC
- 1/4 Amp Res., 250 VDC

#### PG Series

- 15 Amp Res., 125 VAC
- 10 Amp Res., 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC

- ① PC Series, UL recognized component, rated 10 Amp Res., 125/250 VAC; 1/3 HP 125/250 VAC.
- ② Open frame construction, UL recognized component.
- ③ FM listed for air flow interlocking service.

### Standard Temperature Ratings

- Ambient:** -4°F (-20°C) to 122°F (50°C)
- Fluid:**
  - For Buna "N" or Neoprene Diaphragm: -4°F (-20°C) to 180°F (82°C)
  - For Viton Diaphragm: -4°F (-20°C) to 250°F (121°C)
  - For 316 SS Diaphragm: -50°F (-45°C) to 300°F (149°C)
  - For Nylon Transducers: -4°F (-20°C) to 180°F (82°C)

## Enclosures

ASCO TRI-POINT switches are available in either a general purpose or watertight enclosure, in addition to open frame construction. These enclosed units are made in accordance with NEMA and UL standards. These standards define the protection level an enclosure gives and the tests it must pass to meet a particular design.

**General Purpose** – Type 1. These enclosures are designed for indoor use to protect personnel from accidental contact with the equipment. P-Series general purpose enclosures are painted, zinc-coated

steel and have a 7/8" diameter hole at the top for electrical entry.

**Watertight** – Type 4. Watertight and dust-tight enclosures are intended for use indoors and outdoors to protect the enclosed equipment against splashing or falling water, windblown dust and water, hose directed water, and severe external condensation. P-Series watertight switch enclosures are epoxy-painted, zinc-coated steel with a 1/2" conduit hub in the side of the lower housing for electrical entry. (For optional 316 SS watertight enclosure see page 13.)

## Dimensions (inches)

# P-SERIES Pressure Switches

General Purpose Enclosure

Watertight Enclosure

## How to Select and Order

ASCO P-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation pressure.
2. Check that proof pressure is sufficient.
3. Read across and select the desired P-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

All switch units above are in stock for immediate delivery.

① Values shown are nominal. ② Rated proof pressure on RF10A71 is 150 psig and on RG10A71 is 300 psig.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., PA36A/RD30A11.

**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one PA36A and one RD30A11.

**Options** – Add appropriate suffix for desired option or accessory (see pages 34-35).

**Important Note:** The third digit of each of the catalog numbers must be identical, e.g., PA 3 6A and RD 3 0A11.

## PA, PB, or PC unit below

### PC Switch Unit

**Two-Stage Fixed Deadband** units consist of two separate snap-action switches, each with an independently adjustable set point and non-adjustable reset point. The difference between the set and reset points of each switch is the deadband listed below; the minimum difference between the set points of the two switches is the separation.

## Select transducer unit below

Standard connection is 1/4" NPT  
(optional 1/2" NPT add suffix "B" to catalog number)

### Transducer Unit

These **gauge pressure type transducers** provide for one pressure connection in the bottom of the transducer. They are diaphragm/piston type transducers using an elastomer in contact with the fluid, backed by a piston cylinder. This allows high sensitivity for low pressures and strength for high pressures.

# P-SERIES Pressure Switches

## How to Select and Order

ASCO P-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation pressure.
2. Check that rated proof pressure is sufficient.
3. Read across and select the desired P-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., PG36A/RV34A11.  
**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one PG36A and one RV34A11.  
**Options** – Add appropriate suffix for desired option (see pages 34-35).  
**Important Note:** The third digit of each of the catalog numbers must be identical, e.g., PG 36A and RV 34A11.

All switch units and transducer units above are in stock for immediate delivery.

① Values shown are nominal. ② Rated proof pressure on RF10A71 is 150 psig and on RG10A71 is 300 psig.

③ 316 SS transducer deadbands are approx. 50% greater than listed. ④ Transducers ending in 32 have 303 SS process connections, not 316 SS.

# S-SERIES Pressure Switches

## Switches for Pressure to 8000 psig, Vacuum, or Differential with General Purpose, Watertight or Explosion-Proof Enclosures

### Features:

- Set point repeatability,  $\pm 1\%$  of operating range.
- All wiring terminals, adjustments and visual scales are accessible from the front of the switch.
- Choice of general purpose, watertight or explosion-proof enclosures.
- Choice of fixed or full-range adjustable deadband.
- Choice of single or two-stage units.
- Manual reset units available.
- Mounts in any position.
- Rugged and vibration resistant.
- Visual adjustment scales in psi and bars.
- External adjusting nuts.
- Separate electrical, pressure and adjusting chambers.
- Wide selection of transducer wetted materials suitable for air, water, oil or corrosive fluids.
- Mix and match switch and transducer components for increased stock flexibility or to change pressure ranges in field.

### General Description:

ASCO S-Series pressure switches consist of a switch unit and a transducer unit. They can be ordered separately for customer stocking and/or field assembly or as a complete factory-assembled unit.

### Switch

S-Series pressure switch units incorporate the unique ASCO TRI-POINT alternating fulcrum balance plate to control the operation of one or more electrical snap-action switches. The electrical snap-action switch together with the adjusting mechanism is a fully-tested, self-contained subassembly.

### Transducer

Transducer unit incorporates a diaphragm/piston type pressure sensor, and is also a fully-tested, self-contained subassembly.

### Operation

When pressure is applied to the transducer it is converted into movement of the piston. This piston movement is then used to control the operation of the electrical snap-action switch in the switch unit.

### Standard Electrical Ratings

#### SA, SB, SC, SD and SE Series

- 15 Amp Res., 125 VAC
- 10 Amp Res., 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC
- 1/2 Amp Res., 125 VDC
- 1/4 Amp Res., 250 VDC

### Standard Temperature Ratings

- Ambient:** -4°F (-20°C) to 140°F (60°C)
- Fluid:** For Buna "N" or Neoprene Diaphragm  
-4°F (-20°C) to 180°F (82°C)
- For Viton Diaphragm  
-4°F (-20°C) to 250°F (121°C)
- For 316 SS Diaphragm  
-50°F (-45°C) to 300°F (149°C)

**Options** (See pages 34-35)

## Switches with Optional 316 Stainless Steel Enclosure

Every ASCO P-Series pressure switch is available in a corrosion-resistant, stainless steel enclosure. Typical applications include:

- Offshore platforms
- Hydrocarbon processing plants
- Oil & gas fields
- Oil & gas transmission lines
- Chemical plants
- Breweries
- Paper pulp mills
- Salt spray locations

### Stainless Steel Enclosure

ASCO Type 4X watertight enclosure is designed to provide protection against windblown dust, rain, sleet or external ice formation. The switch and transducer unit are available only as factory-assembled units, and include a UL-approved 1/2" NPT conduit hub.

### How to Select and Order

ASCO P-Series switches with 316 SS enclosure consist of two factory-assembled components, the switch unit and the transducer unit.

**How to Select** (use tables on pages 10-12)

1. Select the adjustable operating range based on desired actuation pressure.
2. Check that rated proof pressure is sufficient.
3. Read across and select the desired P-Series switch unit with open frame construction.
4. To add a 316 SS enclosure, change the fourth digit of the open frame catalog number from "6" to "4", e.g., PG3 [6] A becomes PG3 [4] A.
5. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled only** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., PG34A/RV34A32.

**Options** – Add appropriate suffix for desired option (see pages 34-35).

### Dimensions (inches)

## Enclosures

ASCO TRI-POINT S-Series switches are available in three standard enclosures. All of these enclosed units are made in accordance with NEMA and UL standards.

**General Purpose** – Type 1. These enclosures are designed for indoor use to protect personnel from accidental contact with the equipment. S-Series general purpose switch units consist of a copper-free\* aluminum die-cast body with a formed copper-free\* aluminum cover; two 3/4" conduit hubs with one plug are provided.

**Watertight** – Type 4. Watertight and dust-tight enclosures are intended for use indoors and outdoors to protect the enclosed equipment against splashing or falling water, windblown dust and water, hose directed water, and severe external condensation. S-Series watertight switch units have a copper-free\* aluminum die-cast body and a formed copper-free\* aluminum cover with Buna "N" gaskets; two 3/4" conduit hubs with one plug are provided.

**Explosion-Proof** – Types 7 and 9. Type 7 enclosures are intended for use in locations defined by the National Electrical Code as Class I. Type 9 enclosures are intended for Class II locations.

Class I locations are those in which flammable gases are or may be present in the air in sufficient quantities to produce explosive or ignitable mixtures. Class I locations are classified by group letter, which defines particular atmospheres. Division 1 locations are areas where the hazardous concentration exists continuously, intermittently or periodically under normal operating conditions. Division 2 locations are those where the hazardous vapors are present only in case of accidental rupture or breakdown of equipment.

ASCO TRI-POINT explosion-proof enclosures with letter **B**, **C** or **D** in the fifth position are listed for Class I, Groups B, C, and D, Division 1. They are also suitable for the less stringent Division 2 environment.

Class II locations are those which are hazardous because of the presence of combustible dust. All ASCO TRI-POINT explosion-proof enclosures are listed for Groups E, F, and G locations.

The switch body and cover are die-cast copper-free\* aluminum with a Buna "N" gasket. Two 3/4" conduit hubs with one plug are provided.

## Dimensions (inches)

\* Less than 0.6% copper.

# S-SERIES Pressure Switches (to 8000 psig)

## How to Select and Order

ASCO S-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation pressure.
2. Check that proof pressure is sufficient.
3. Read across and select the desired S-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., SA40D/TA40A11.

**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one SA40D and one TA40A11.

## Select S-Series pressure switch

### SA Switch Unit

**Single-Stage Adjustable Deadband** units allow independent adjustment of the set and reset points over the full operating range of the switch. The minimum difference between set and reset points is the deadband listed below; the maximum difference is the full range of the switch.

General Purpose

### SB, SD or SE Switch Unit

**SB Switch Unit: Single-Stage Fixed Deadband** units have an adjustable set point and a non-adjustable automatic reset point.  
**SD Switch Unit: Manual reset on decreasing pressure** units operate automatically on increasing pressure and must be reset manually on decreasing pressure. (To order, change second digit to letter "D", e.g., S[B]40D becomes S[D]40D).  
**SE Switch Unit: Manual reset on increasing pressure** units operate automatically on decreasing pressure and must be reset manually on increasing pressure. (To order, change second digit to letter "E", e.g., S[B]40D becomes S[E]40D).

## Select transducer unit below

**Series TA-TC**

**Series TD-TQ**

**Standard connection is 1/4" NPT; (Optional 1/2" NPT add suffix "B" to catalog numbers TD thru TQ)**

### Transducer Unit

These **gauge pressure type transducers** provide for one pressure connection in the bottom of the transducer. They are diaphragm/piston type transducers using an elastomer in contact with the fluid, backed by a piston cylinder. This allows high sensitivity for low pressures and strength for high pressures.

**All switch units and transducer units above are in stock for immediate delivery.**

② 316 SS transducers increase deadband by 50%.    ③ Transducers ending in 32 have 303 SS process connections, not 316 SS.

# S-SERIES Vacuum, Differential Switches

## How to Select and Order

ASCO S-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation point.
2. Check that proof pressure is sufficient.
3. Read across and select the desired S-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., SA30D/TA34A11.

**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one SA30D and one TA34A11.

**Options** – Add appropriate suffix for desired option (see pages 34-35).

**Important Note:** The third digit of each of the catalog numbers must be identical, e.g., SA 30D and TA 34A11.

Select S-Series pressure switch						SA, SB, SC, SD and SE unit below					
SA Switch Unit			SB, SD or SE Switch Unit			SC Switch Unit					
<b>Single-Stage Adjustable Deadband</b> units allow independent adjustment of the set and reset points over the full operating range of the switch. The minimum difference between set and reset points is the deadband listed below; the maximum difference is the full range of the switch.			<b>SB Switch Unit: Single-Stage Fixed Deadband</b> units have an adjustable set point and a non-adjustable automatic reset point.			<b>Two-Stage Fixed Deadband</b> units consist of two separate snap-action switches, each with an independently adjustable set point and non-adjustable reset point. The difference between the set and reset points of each switch is the deadband listed below; the minimum difference between the set points of the two switches is the separation.			 Vacuum Transducer		
 General Purpose			<b>SD Switch Unit: Manual reset on decreasing pressure</b> units operate automatically on increasing pressure and must be reset manually on decreasing pressure. All switch units and transducer units above are in stock for immediate delivery.

<sup>Ⓢ</sup> Values shown are nominal.

# S-SERIES Combustion Switches

## Pressure Switches Designed to UL or FM Requirements for Combustion Service

### Features:

- Set point repeatability,  $\pm 1\%$  of operating range.
- UL Listed in the gas and oil equipment list.
- FM Approved as “pressure supervisory switches.”
- Externally visible pressure setting scales.
- External adjusting nuts.
- Choice of fixed or full-range adjustable deadbands.
- Choice of single or two-stage units.
- Mounts in any position.
- Rugged and vibration resistant.
- Separate electrical, pressure and adjusting chambers.
- Mix and match switch and transducer components for increased stock flexibility or to change pressure ranges in field.
- Withstands high surge pressures.

### General Description:

ASCO S-Series combustion switches consist of a switch unit and a transducer unit. They can be ordered separately for customer stocking and/or field assembly or as a complete factory-assembled unit.

### Switch

S-Series combustion switch units incorporate the unique ASCO TRI-POINT alternating fulcrum balance plate to control the operation of one or more electrical snap-action switches. The electrical snap-action switch together with the adjusting mechanism is a fully-tested, self-contained subassembly.

### Transducer

Transducer unit incorporates a diaphragm/piston type pressure sensor, and is also a fully-tested, self-contained subassembly.

### Operation

When pressure is applied to the transducer it is converted into movement of the piston. This piston movement is then used to control the operation of the electrical snap-action switch in the switch unit.

**Options** (See pages [34-35](#))

**Dimensions** (See page [15](#))

### Standard Electrical Ratings

#### SA, SD and SE Series ①

- 5 Amp Res., 125, 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC
- 1/2 Amp Res., 125 VDC
- 1/4 Amp Res., 250 VDC

#### SB and SC Series

- 5 Amp Res., 125, 250 VAC
- 1/4 HP, 125 VAC
- 1/2 HP, 250 VAC
- .4 Amp Res., 125, VDC

① SD and SE Series not FM Approved.

### Standard Temperature Ratings

- Ambient:** -4°F (-20°C) to 140°F (60°C)
- Fluid:** For Buna “N” or Neoprene Diaphragm  
-4°F (-20°C) to 180°F (82°C)
- For Viton Diaphragm  
-4°F (-20°C) to 250°F (121°C)
- For 316 SS Diaphragm  
-50°F (-45°C) to 300°F (149°C)

## UL Requirements

Underwriters' Laboratories, Inc.'s Standard UL 353 defines construction and performance requirements for limit controls.

## Switch

S-Series combustion switch units when mated to the pressure transducers described below form pressure switches in accordance with UL requirements.

## Transducers

**Fuel Gas** – UL requires a pressure transducer with a secondary chamber. This chamber allows the gas to be vented to a safe location in the event of primary sensing element rupture. The “double chamber” with vent pressure transducers meet this requirement.

**Fuel Oil** – UL requirements for fuel oil applications waive the double chamber requirement, providing the sensing element is made of Type 316 or 321 SS. S-Series type 316 SS pressure transducers are designed to meet this requirement.

**General Service** – Pressure transducers for water, steam and air service may be of the single chamber design.

## Enclosures

ASCO TRI-POINT S-Series switches are available in three standard enclosures. All of these enclosed units are made in accordance with NEMA and UL standards.

**General Purpose** – Type 1. These enclosures are designed for indoor use to protect personnel from accidental contact with the equipment. S-Series general purpose switch units consist of a copper-free\* aluminum die-cast body with a formed copper-free\* aluminum cover; two 3/4” conduit hubs with one plug are provided.

**Watertight** – Type 4. Watertight and dust-tight enclosures are intended for use indoors and outdoors to protect the enclosed equipment against splashing or falling water, windblown dust and water, hose directed water, and severe external condensation. S-Series watertight switch units have a copper-free\* aluminum die-cast body and a formed copper-free\* aluminum cover with Buna “N” gaskets; two 3/4” conduit hubs with one plug are provided.

**Explosion-Proof** – Types 7 and 9. Type 7 enclosures are intended for use in locations defined by the National Electrical Code as Class I. Type 9 enclosures are intended for Class II locations.

Class I locations are those in which flammable gases are or may be present in the air in sufficient quantities to produce explosive or ignitable mixtures. Class I locations are classified by group letter, which defines particular atmospheres. Division 1 locations are areas where the hazardous concentration exists continuously, intermittently or periodically under normal operating conditions. Division 2 locations are those where the hazardous vapors are present only in case of accidental rupture or breakdown of equipment.

ASCO TRI-POINT explosion-proof enclosures with letter **B**, **C** or **D** in the fifth position are listed for Class I, Groups B, C, and D, Division 1. They are also suitable for the less stringent Division 2 environment.

Class II locations are those which are hazardous because of the presence of combustible dust. All ASCO TRI-POINT explosion-proof enclosures are listed for Groups E, F, and G locations.

The switch body and cover are die-cast copper-free\* aluminum with a Buna “N” gasket. Two 3/4” conduit hubs with one plug are provided.

## FM Requirements

**Fuel Gas and Fuel Oil** – FM requires that fuel gas and fuel oil pressure supervisory switches shall have a visible external means of determining switch position. No specific constructions are required for the pressure transducer. Switch units with visual position indication (suffix “V”) in conjunction with single chamber pressure transducers will meet these requirements.

**General Service** – Standard switch units with an adjusting nut cover, when mated to single chamber transducers, meet FM requirements for general applications such as “airflow interlocking switches”.

## Enclosures

**General Purpose** – Designed to Type 1 specifications for indoor applications. Die casting is copper-free\* aluminum; covers are polycarbonate. Two 3/4” conduit hubs with one plug are provided.

**Watertight** – Designed to Types 4 specifications for indoor/outdoor use. Die casting is copper-free\* aluminum. Cover are polycarbonate and gaskets are neoprene. Two 3/4” conduit hubs with one plug are provided.

\* Less than 0.6% copper.

# S-SERIES Combustion Switches

## How to Select and Order

ASCO S-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation pressure.
2. Check that proof pressure is sufficient.
3. Read across and select the desired S-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., SA30D/TA31A11.

**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one SA30D and one TA31A11.

## Select S-Series pressure switch

### SA Switch Unit

#### Single-Stage Adjustable Deadband

units allow independent adjustment of the set and reset points over the full operating range of the switch. The minimum difference between set and reset points is the deadband listed below; the maximum difference is the full range of the switch.

UL General Purpose

### SB, SD or SE Switch Unit

#### SB Switch Unit: Single-Stage Fixed

Deadband units have an adjustable set point and a non-adjustable automatic reset point.

**SD Switch Unit: Manual reset on decreasing pressure** units operate automatically on increasing pressure and must be reset manually on decreasing pressure.

(To order, change second digit to letter "D", e.g., S[B]30D becomes S[D]30D).

**SE Switch Unit: Manual reset on increasing pressure** units operate automatically on decreasing pressure and must be reset manually on increasing pressure.

(To order, change second digit to letter "E", e.g., S[B]30D becomes S[E]30D).

③ 316 SS transducers increase deadband by 50%. ④ Transducers ending in 32 have 303 SS process connections, not 316 SS.

# P-SERIES Temperature Switches

## Switches for -60 through 510°F with Adjustable Set Points and Fixed or Adjustable Deadband

### Features:

- Set point repeatability,  $\pm 1^\circ\text{F}$  ( $1/2^\circ\text{C}$ ).
- All wiring terminals, adjustments and visual scales are accessible from the front of the switch.
- Choice of open frame type, general purpose, or watertight enclosure.
- Choice of fixed, limited adjustable or full-range adjustable deadband.
- Choice of single or two-stage units.
- Compact size.
- Mounts in any position.
- Rugged and vibration resistant.
- Visual adjustment scales in  $^\circ\text{F}$  and  $^\circ\text{C}$ .
- Direct mount (local) or capillary and bulb (remote) sensors.
- Temperature transducers available with copper or 316 SS wetted material.
- Withstands high overrange temperatures.
- Mix and match switch and transducer components for increased stock flexibility or to change pressure ranges in field.

### General Description:

ASCO P-Series temperature switches consist of an open frame or enclosure protected switch unit and a transducer unit. They can be ordered separately for customer stocking and/or field assembly or as a complete factory-assembled unit.

### Switch

P-Series temperature switch units incorporate the unique ASCO TRI-POINT alternating fulcrum balance plate to control the operation of one or more electrical snap-action switches. The electrical snap-action switch together with the adjusting mechanism is a fully-tested, self-contained subassembly.

### Transducer

The temperature transducer unit uses a vapor pressure principle where the internal pressure within the unit is generated by the vapor pressure of a chemical within a sealed system. Temperature transducers are available in two constructions, a direct mount or capillary and bulb construction. The direct mount unit includes a 1/2" NPT connection for direct mounting to the process. The capillary and bulb construction allows remote mounting from the process. The transducer unit (like the switch unit) is a fully-tested, self-contained subassembly.

### Standard Electrical Ratings

#### PA, PB, PC <sup>Ⓢ</sup> Series

- 15 Amp Res., 125 VAC
- 10 Amp Res., 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC
- 1/2 Amp Res., 125 VDC
- 1/4 Amp Res., 250 VDC

#### PG <sup>Ⓢ</sup> Series

- 15 Amp Res., 125 VAC
- 10 Amp Res., 250 VAC
- 1/8 HP, 125 VAC
- 1/4 HP, 250 VAC

<sup>Ⓢ</sup> PC and PG Series not UL listed or CSA approved, PC Series rated 10 Amp Res., 125/250 VAC; 1/3 HP 125/250 VAC.

### Standard Temperature Ratings

**Ambient:** -4°F (-20°C) to 122°F (50°C)

**Fluid:** See specification table on page 26 for rated overrange temperature.

### Operation

Temperature sensed by the bulb creates an internal pressure within the transducer. This pressure is then converted into movement of the piston. This piston movement is then used to control the operation of the electrical snap-action switch in the switch unit.

**Options** (See pages 34-35)

## Enclosures

ASCO TRI-POINT switches are available in either a general purpose or watertight enclosure, in addition to open frame construction. These enclosed units are made in accordance with NEMA and UL standards. These standards define the protection level an enclosure gives and the tests it must pass to meet a particular design.

**General Purpose** – Type 1. These enclosures are designed for indoor use to protect personnel from accidental contact with the equipment. P-Series general purpose enclosures are painted, zinc-coated

steel and have a 7/8" diameter hole at the top for electrical entry.

**Watertight** – Type 4. Watertight and dust-tight enclosures are intended for use indoors and outdoors to protect the enclosed equipment against splashing or falling water, windblown dust and water, hose directed water, and severe external condensation. P-Series watertight switch enclosures are epoxy-painted, zinc-coated steel with a 1/2" conduit hub in the side of the lower housing for electrical entry. (For optional 316 SS watertight enclosure see page 29.)

## How to Select and Order

ASCO P-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation temperature.
2. Check that rated overrange temperature is sufficient.
3. Read across and select the desired P-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit.

## Select P-Series temperature switch

### PA Switch Unit

**Single-Stage Adjustable Deadband** units allow independent adjustment of the set and reset points over the full operating range of the switch. The minimum difference between set and reset points is the deadband listed below; the maximum difference is the full range of the switch.

Open Frame

### PB Switch Unit

**Single-Stage Fixed Deadband** units have an adjustable set point and a non-adjustable automatic reset point.

## Switches with Optional 316 Stainless Steel Enclosure

Every ASCO P-Series temperature switch is available in a corrosion-resistant, stainless steel enclosure. Typical applications include:

- Offshore platforms
- Hydrocarbon processing plants
- Oil & gas fields
- Oil & gas transmission lines
- Chemical plants
- Breweries
- Paper pulp mills
- Salt spray locations

### Stainless Steel Enclosure

ASCO Type 4X watertight enclosure is designed to provide protection against windblown dust, rain, sleet or external ice formation. The switch and transducer unit are available only as factory-assembled units.

### How to Select and Order

ASCO P-Series switches with 316 SS enclosure consist of two factory-assembled components, the switch unit and the transducer unit.

### How to Select (use tables on pages 26-28)

1. Select the adjustable operating range based on desired actuation temperature.
2. Check that rated overrange temperature is sufficient.
3. Read across and select the desired P-Series switch unit with open frame construction.
4. To add a 316 SS enclosure, change the fourth digit of the open frame catalog number from "6" to "5", e.g., PG1 [6]A becomes PG5 [5]A.
5. Continue across and select a matching direct mount or capillary and bulb transducer unit compatible with the fluid. For direct mount unit add suffix "D" to switch catalog number, e.g., PG15A becomes PG15AD; for capillary and bulb unit add suffix "C", e.g., PG15A becomes PG15AC.

### How to Order

**Factory assembled only** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., PG15AD/KA10A4 for direct mount and PG15AC/KA11A4 for capillary and bulb unit.

**Options** – Add appropriate suffix for desired option (see pages 34-35).

### Dimensions (inches)

# S-SERIES Temperature Switches

## Switches for -60 through 640°F with Adjustable Set Points, Fixed or Adjustable Deadband and General Purpose, Watertight or Explosion-Proof Enclosures

### Features:

- Set point repeatability,  $\pm 1^{\circ}\text{F}$  ( $1/2^{\circ}\text{C}$ ).
- All wiring terminals, adjustments and visual scales are accessible from the front of the switch.
- Choice of general purpose, watertight or explosion-proof enclosures.
- Choice of fixed or full-range adjustable deadband.
- Choice of single or two-stage units.
- Manual reset units available.
- Mounts in any position.
- Rugged and vibration resistant.
- Visual adjustment scales in  $^{\circ}\text{F}$  and  $^{\circ}\text{C}$ .
- External adjusting nuts.
- Separate temperature, electrical and adjusting chambers.
- Direct mount (local) or capillary and bulb (remote) sensors.
- Temperature transducers available with copper or 316 stainless steel wetted material.
- Withstands high overrange temperatures.
- Mix and match switch and transducer components for increased stock flexibility or to change pressure ranges in field.

### General Description:

ASCO S-Series temperature switches consist of a switch unit and a transducer unit. They can be ordered separately for customer stocking and/or field assembly or as a complete factory-assembled unit.

### Switch

S-Series temperature switch units incorporate the unique ASCO TRI-POINT alternating fulcrum balance plate to control the operation of one or more electrical snap-action switches. The electrical snap-action switch together with the adjusting mechanism is a fully-tested, self-contained subassembly.

### Transducer

The temperature transducer unit uses a vapor pressure principle where the internal pressure within the unit is generated by the vapor pressure of a chemical within a sealed system. Temperature transducers are available in two constructions, a direct mount or capillary and bulb construction. The direct mount unit includes a 1/2" NPT connection for direct mounting to the process. The capillary and bulb construction allows remote mounting

from the process. The transducer unit (like the switch unit) is a fully-tested, self-contained subassembly.

### Operation

Temperature sensed by the bulb creates an internal pressure within the transducer. This pressure is then converted into movement of the piston. This piston movement is then used to control the operation of the electrical snap-action switch in the switch unit.

**Options** (See pages 34-35)

## Enclosures

ASCO TRI-POINT S-Series switches are available in three standard enclosures. All of these enclosed units are made in accordance with NEMA and UL standards.

**General Purpose** – Type 1. These enclosures are designed for indoor use to protect personnel from accidental contact with the equipment. S-Series general purpose switch units consist of a copper-free\* aluminum die-cast body with a formed copper-free\* aluminum cover; two 3/4" conduit hubs with one plug are provided.

**Watertight** – Type 4. Watertight and dust-tight enclosures are intended for use indoors and outdoors to protect the enclosed equipment against splashing or falling water, windblown dust and water, hose directed water, and severe external condensation. S-Series watertight switch units have a copper-free\* aluminum die-cast body and a formed copper-free\* aluminum cover with Buna "N" gaskets; two 3/4" conduit hubs with one plug are provided.

**Explosion-Proof** – Types 7 and 9. Type 7 enclosures are intended for use in locations defined by the National Electrical Code as Class I. Type 9 enclosures are intended for Class II locations.

Class I locations are those in which flammable gases are or may be present in the air in sufficient quantities to produce explosive or ignitable mixtures. Class I locations are classified by group letter, which defines particular atmospheres. Division 1 locations are areas where the hazardous concentration exists continuously, intermittently or periodically under normal operating conditions. Division 2 locations are those where the hazardous vapors are present only in case of accidental rupture or breakdown of equipment.

ASCO TRI-POINT explosion-proof enclosures with letter **B**, **C** or **D** in the fifth position are listed for Class I, Groups B, C, and D, Division 1. They are also suitable for the less stringent Division 2 environment.

Class II locations are those which are hazardous because of the presence of combustible dust. All ASCO TRI-POINT explosion-proof enclosures are listed for Groups E, F, and G locations.

The switch body and cover are die-cast copper-free\* aluminum with a Buna "N" gasket. Two 3/4" conduit hubs with one plug are provided.

## Dimensions (inches)

\* Less than 0.6% copper.

# S-SERIES Temperature Switches

## How to Select and Order

ASCO S-Series switches consist of two components, the switch unit and the transducer unit.

### How to Select

1. Select the adjustable operating range based on desired actuation temperature.
2. Check that rated overrange temperature is sufficient.
3. Read across and select the desired S-Series switch unit with the proper enclosure.
4. Continue across and select a matching transducer unit compatible with the fluid.

### How to Order

**Factory assembled** – Simply order the switch and transducer unit by catalog number joined by a slash (/), e.g., SA10D/QA10A1.

**Field assembled** – Simply order the switch and transducer units separately by individual catalog number, e.g., one SA10D and one QA10A1.

**Options** – Add appropriate suffix for desired option (see pages 34-35).

**Important Note:** The third digit of each of the catalog numbers must be identical, e.g., SA 10D and QA 10A1.

## Select S-Series temperature switch

### SA Switch Unit

**Single-Stage Adjustable Deadband** units allow independent adjustment of the set and reset points over the full operating range of the switch. The minimum difference between set and reset points is the deadband listed below; the maximum difference is the full range of the switch.

General Purpose

### SB, SD or SE Switch Unit

**SB Switch Unit: Single-Stage Fixed Deadband** units have an adjustable set point and a non-adjustable automatic reset point.  
**SD Switch Unit: Manual reset on decreasing temperature** units operate automatically on increasing temperature and must be reset manually on decreasing temperature. (To order, change second digit to letter "D", e.g., S B 40D becomes S D 40D).  
**SE Switch Unit: Manual reset on increasing temperature** units operate automatically on decreasing temperature and must be reset manually on increasing temperature. (To order, change second digit to letter "E", e.g., S B 40D becomes S E 40D).

All switch units and transducer units above are in stock for immediate delivery.

# OPTIONS Pressure/Temperature Switches

## H-Series, P-Series and S-Series Snap-Action Switch Options

Optional snap-action switches to meet specific electrical loads or application conditions are available on most ASCO TRI-POINT switch units. Generally, the construction of a switch unit with optional snap-action switches contains other specific parts and may be ordered only as a factory-built unit. To specify a particular optional construction, add the appropriate suffix to the switch unit catalog number, e.g., SA10D with optional gold contact snap-action switch (suffix "P") would become SA10D[P].

## P-Series Switch Options

**Panel Mount** – Open frame P-Series compact switch units are available for panel mounting with the switch unit inside and the transducer outside. The panel separates the fluid sensing portion from the electromechanical portion. Five holes for bolts and operating stem must be drilled or punched through the panel. Three constructions are available: add the suffix listed below to the switch unit catalog number for the desired thickness.

Description	Electrical Rating	Catalog Suffix	Deadband Variation From Listing
DC Rating 1 Amp Double Break	5 Amp, 125, 250 VAC 1/4 HP, 125 VAC 1/2 HP, 250 VAC 1 Amp, 125 VDC 1/2 Amp, 250 VDC	G	SA: +50% SB, SC, PA: +100% H: +200% PB: +400%
DC Rating 10 Amps, SPDT	10 Amp, 125 VAC, VDC 1/8 HP, 125 VAC, VDC	M	SA: +50% SB, SC, PA: +100% H: +120% PB: +400%
Double-pole Double-throw (Two SPDT Switches with Common Lever) Gold Contact Dry Circuit SPDT	5 Amp, 125, 250 VAC 1/8 HP, 125 VAC 1/4 HP, 250 VAC 1/2 Amp, 125 VDC 1/4 Amp, 250 VDC 1 Amp, 28 VAC 1 Amp, 28 VDC	K  P	SA, SB, SD, SE, PB: +50%  SA, SB, SC, PA: +25% H: +50% PB, PC: +100%
Hermetically Sealed SPDT	25 Amp Res, 28 VDC 10 Amp Ind, 28 VDC 5 Amp Motor, 28 VDC 3 Amp Lamp, 28 VDC 1 Amp, 125 VAC	H	SA, PA: +100% H: +200% PB: +600%
High Ambient 250°F SPDT	5 Amp, 125, 250 VAC 1/8 HP, 125 VAC 1/4 HP, 250 VAC 1/2 Amp, 125 VDC 1/4 Amp, 250 VDC 20 Amp, 125, 250 VAC	F	SA, SB, SC: +25%
High Power 1 HP SPDT	1 HP, 125 VAC 2 HP, 250 VAC 1/2 Amp, 125 VDC 1/4 Amp, 250 VDC	W	SA: +50% SB, SC: +100% PB: +400%
Moisture Resistant Sealed Switch SPDT	5 Amp, 125, 250 VAC 1/8 HP, 125 VAC 1/4 HP, 250 VAC 1/2 Amp, 125 VDC 1/4 Amp, 250 VDC	J	SA: None SB, SC, PA: +25% PB, H: +50%
Tight Fixed Deadband SPDT	5 Amp, 125, 250 VAC 1/8 HP, 125 VAC 1/4 HP, 250 VAC 1/2 Amp, 125 VDC	T	SB, SC: -50%

Panel Thickness	Suffix
10 Ga (.135±.005)	10
14 Ga (.075±.005)	11
16 Ga (.060±.005)	12

## S-Series Switch Options

**Industrial Adjusting Nut Covers** – Available in clear plastic or metal to prevent tampering with set point adjusting nuts.

**Clear plastic cover:** To order, add suffix "1" to the switch unit catalog number, or order separately as SP01.  
**Metal cover:** To order, add suffix "2" to the switch unit catalog number, or order separately as SP02.

**JIC Construction** – A switch unit having the electrical and adjusting nut covers attached to the switch body by a chain. Also designed to Type 13 specifications. To order, add suffix "3" to the switch unit catalog number, or order separately as SP03.

**Terminal Block** – Applicable to switch units with one single-poledouble-throw switch. The terminal strip is prewired to the snap-action switch. To order, add suffix "4" to the switch unit catalog number, or order separately as SP04.

**Factory Sealed** – Explosion-proof units may be ordered with a factory seal separating the electrical chamber from the conduit hubs and 24" long #14 AWG 105°C. rated lead wires. To order, change the fourth digit of the switch unit catalog number from "2" to "3", e.g., SA1[2]D becomes SA1[3]D.

## Pressure Transducer Options

**Special Wetted Materials** – The following diaphragms may be substituted on transducer body materials of aluminum, brass, polyester and stainless steel. To order, substitute the material code below in the seventh digit of the transducer catalog number, e.g., a TF10A1 [1] with optional viton diaphragm becomes a TF10A1 [2].

Diaphragm	Material Code	Temperature Range
Buna "N"	1	-4°F (-20°C) to 180°F (82°C)
Ethylene Propylene	6	-4°F (-20°C) to 250°F (121°C)
Neoprene	3	-4°F (-20°C) to 180°F (82°C)
Fluorosilicone	7	-40°F (-40°C) to 250°F (121°C)
Viton	2	-4°F (-20°C) to 250°F (121°C)

**Oxygen Cleaning** – Pressure transducers for oxygen service should be specially cleaned. They are degreased and blacklight inspected, then assembled in a clean area and tested with oil-free air or nitrogen. Use metal body transducer with viton or neoprene diaphragm and add suffix "H" to transducer catalog number, e.g., TA40A13 becomes TA40A13 [H].

**Pressure Snubbers** – A pressure snubber (1/4" NPTF by 1/4" NPTM) installed in the transducer pressure connection will dampen the pressure spikes to a value which will not cause damage. It consists of a body with a porous metal disc of stainless steel through which the fluid passes. To order, select a snubber compatible with the fluid. Available by separate catalog number only (see table below).

Fluid	Brass Catalog No.	303 SS Catalog No.
Air, Non-Hazardous Gases	TP04G2	TP04G3
Water, Light Oil (under 225 SSU)	TP04E2	TP04E3
Oil (Heavy, (over 225 SSU)	TP04D2	TP04D3
Pressure Rating (psig)	2000	5000

**Process Connection** – A female process connection (1/4" NPT) is standard on all pressure transducers. A 1/2" NPT is available as an option on *gauge* pressure transducers. To order, add suffix "B" to transducer catalog number, e.g., RF10A21 becomes RF10A21 [B].

**Note:** Not available on nylon transducers.

## P-Series and S-Series Temperature Transducer Options

**Armored Capillaries** – Double braided copper armor is standard for copper capillary units. Stainless steel spiral interlocked armor is available for stainless steel capillary units. Add suffix "C" to transducer catalog number.

**Thermal Well**

**Thermal Well** ① – Use with direct or remote sensors for protecting sensing bulb. This allows removal of bulb while maintaining a pressure-tight vessel. Available in 1/2" NPT or 3/4" NPT process connection in brass or 316 SS. Dimensions are in accordance with SAMA Std. RC17-9. Standard "U" dimension (insertion length) is 2-1/2" for direct mount and 6' capillary units and is 4-1/2" for 12' capillary units.

Material	Pressure Rating (psig)	"U" Dimensions (Inches)	Process Connection	
			1/2" NPT Catalog No.	3/4" NPT Catalog No.
Brass	1000	2-1/2	QP03	QP04
		4-1/2	QP13	QP14
		7-1/2	QP23	QP24
		10-1/2	QP33	QP34
316 SS	6000	2-1/2	QP07	QP08
		4-1/2	QP17	QP18
		7-1/2	QP27	QP28
		10-1/2	QP37	QP38

**Longer Capillaries** – Standard copper and stainless steel capillary units can be furnished in 12' lengths. To order, add suffix "D" to transducer catalog number.

*Consult ASCO for longer length capillaries.*

Capillary Length (Feet)	Transducer Suffix	Bulb Length (Inches)	"U" Dimension Required (Inches)
6	---	3-1/2	2-1/2
12	D	5-1/2	4-1/2
13 - 20	E	5-1/2	4-1/2
21 - 50	F	8-1/2	7-1/2
51 - 80	G	11-1/2	10-1/2

**Union Connector** – For use with remote units for mounting of bulb in fluid being controlled. Available in 1/2" NPT and 3/4" NPT process connections in brass or 316 SS.

Material	Pressure Rating (psig)	Process Connection	
		1/2" NPT Catalog No.	3/4" NPT Catalog No.
Brass	500	QP01	QP02
316 SS	1500	QP05	---

① Jam nuts provided with thermal wells.

# Definitions and Fluid Compatibility Guide

## Definitions

**Accuracy** – The maximum deviation from the set point under specified operating condition (ambient temperature, barometric pressure, etc.).

**Adjustable Deadband** – Refers to the capability of a pressure or temperature switch to allow the deadband to be adjusted over a given range. Certain ASCO TRI-POINT switches have an adjustable deadband which can be adjusted over the total operating range of the switch.

**Adjustable Operating Range** – The pressure or temperature range of the switch within which the set point may be adjusted.

**Differential Pressure** – The difference between two pressures. A differential pressure switch senses two pressure sources and can be adjusted to actuate on a desired difference between them.

**Gauge Pressure** – The actual reading of a typical pressure gauge and is the difference between the pressure within a vessel and the atmospheric pressure surrounding it. It is normally measured in pounds per square inch (psig).

**Manual Reset** – The switch is a semi-automatic device which operates automatically with a signal change in one direction but must be manually reset once the signal returns to its original position.

**Proof Pressure** – A pressure which a device can be subjected to for extended periods of time without changes in its operating characteristics.

**Rated Overrange Temperature** – A temperature which a device can be subjected to for extended periods of time without changes in its operating characteristics.

**Repeatability** – The closeness of agreement among a number of consecutive measurements of the output for the same value of input under the same operating conditions approaching from the same direction. Repeatability is normally specified as a percentage of the upper limit of the operating range.

Example: Operating range 5-100 psig with  $\pm 1\%$  repeatability; equals  $\pm 1\%$  of 100 psig or  $\pm 1$  psig.

**Reset Point** – After a pressure or temperature switch has reached its set point and operated the electrical switch, it must return to a point called the reset point before the electrical switch can return to its original position.

**Set Point** – The pressure reading at which the electrical switch element changes contact position (it can be specified either increasing or decreasing).

**Switch Unit** – ASCO uses the term “switch unit” to describe the electromechanical portion of a pressure or temperature switch. This is used in conjunction with a transducer unit to form a complete pressure or temperature switch.

**Transducer Unit** – ASCO uses the term “transducer unit” to describe that portion of a pressure or temperature switch to which a pressure or temperature is applied which converts the input signal to another form of energy to operate the switch unit.

**Two-Stage (Dual)** – ASCO uses the term “two stage” to describe a pressure or temperature switch which is equivalent to two pressure or temperature switches which are independently adjustable. This switch is equivalent to two fixed deadband switches.

**Deadbands** – The deadband is the difference between the set point and reset point readings. Deadbands are listed in the specification tables at nominal values. They are representative of the deadbands of the units at the middle of the range.

The deadband values for the full range adjustable deadband switches and limited adjustable deadband switches indicate the values through which the deadband may be adjusted.

Generally, as the set point is adjusted through the operating range, the deadband will vary. Normally, it will become narrower as the set point is towards the bottom of the range, and will become wider when the set point is towards the top of the range. The graph shown below indicates representative trends of this type of deadband variation.

### Deadbands

1.5 x Catalog Value

Catalog Value

Half Catalog Value

Temperature switch deadbands are a result of the characteristics of the vapor pressure curve as well as other factors. Normally, this results in a deadband which is narrower in the top third of the range than in the bottom third of the range. The values published are nominal and representative of mid-range set points.

# Fluid Compatibility Guide

These recommendations are to be used as a guide only, as service life of material is dependent on temperature, concentrations, or catalysts that may be added and other conditions which are beyond our control.

Consult ASCO for specific service applications.

**Note:** Items in black circles are standard catalog units.  
All others available on factory order.

**P** - Indicates preferred construction. **S** - Indicates satisfactory construction.

Transducer Material Code of Two Digits represents process connection material and diaphragm material, respectively; these are the sixth and seventh positions of the pressure transducer catalog number.

**Process Connection: 6th Position Diaphragm: 7th Position**

**Notes:** ① For high purity applications use stainless steel transducers. ② Oxygen service requires special cleaning, specify suffix "H". ③ For steam service a condensate loop (pigtail) is required. ④ For pressure transducers for combustion service see pages 20-23. ⑤ Material availability refers to standard gauge pressure constructions only.
